2025

Erin Schuman
MPI for Brain Research

13 Nov
2025

Yifan Cheng
UCSF

The Human Technopole External Seminar Series features leading scientists from various fields, including genomics, neurogenomics, structural biology, computational biology, health data science, biophysical modelling, and molecular cell biology.

These seminars promote interdisciplinary exchange, aligning with the Institute's mission to explore the emergent properties of complex biological systems to study human physiology and its pathological dysfunctions.
